EDUCATION

Vellore Institute of Technology, Chennai
B.Tech, Computer Science Engineering
Expected 2029

TECHNICAL SKILLS

Languages

Java, Python , C/C++

Frontend

React.js, Next.js , Tailwind CSS, HTML, CSS

Backend & Databases

Firebase (Auth & Firestore), Supabase
(PostgreSQL), FastAPI

ML & APIs

Scikit-learn, REST APIs, Google Gemini AI API

Tools

Git, GitHub

OBJECTIVE

Computer Science undergraduate at VIT Chennai (Class of 2029) with hands-on experience building full-stack web applications and ML-based systems through self-driven projects, a hackathon, and a government internship. Skilled in React/Next.js, Firebase/Supabase, and Python — seeking a Software Developer role to contribute and grow technically.

PROJECTS

SpendSmart

React.js · JavaScript (ES6) · Firebase (Auth & Firestore) · Chart.js

- Built a personal finance tracking web app that helps users monitor spending habits and cut down unnecessary expenses
- Implemented secure user login and real-time data storage using Firebase Authentication and Firestore
- Visualized spending trends with Chart.js to give users clear, actionable insight into their financial habits

VomadAI

Next.js 14 · React 18 · Tailwind CSS · Framer Motion · React Three Fiber · Gemini AI API · Supabase

- Built a collaborative trip-planning web app where users can plan trips to any destination, invite friends to co-plan, and browse hotels and flights in one place
- Integrated the Google Gemini AI API to power intelligent trip recommendations and planning assistance
- Used OpenStreetMap Nominatim for location search, Supabase (PostgreSQL) for the backend, and React Three Fiber with Framer Motion for interactive 3D visuals and smooth animations

Vital AI

Hackathon · Team of 3

Python · FastAPI · Scikit-learn

- Built an ML-powered web app that predicts a patient's risk of heart disease from health parameter inputs
- Trained the prediction model with Scikit-learn and served it through a FastAPI backend with REST APIs
- Designed the health-parameter input interface and deployed the app as a fully working web application
- Used AI tools including Claude and Gemini to speed up debugging and streamline the development workflow

EXPERIENCE

Indian Meteorological Department — Intern

1 Month

- Built a tool to decode SYNOP (Surface Synoptic Observation) codes, converting user-entered raw meteorological codes into readable weather data
- Gained exposure to real-world government meteorological data formats and reporting workflows
